

## Top 3 DVD Region Killer

Get to download DVD Region Killer tool and bypass region-coded protections. No need to try external hard drive or useless media player.

Case 1: Can anybody recommend a free easy-to-use DVD Region Killer program?

The hard drive of my laptop had been somehow managed to change the region from 4 to 2. How to deal with my favorite Region 4 DVD collections?

Case 2: My daughter lives in the USA and her laptop's internal drive only supports Region 1 discs. But sometimes she would like to watch some motherland UK Region 2 discs. Is it possible to run an external DVD drive to play Region 2 discs?

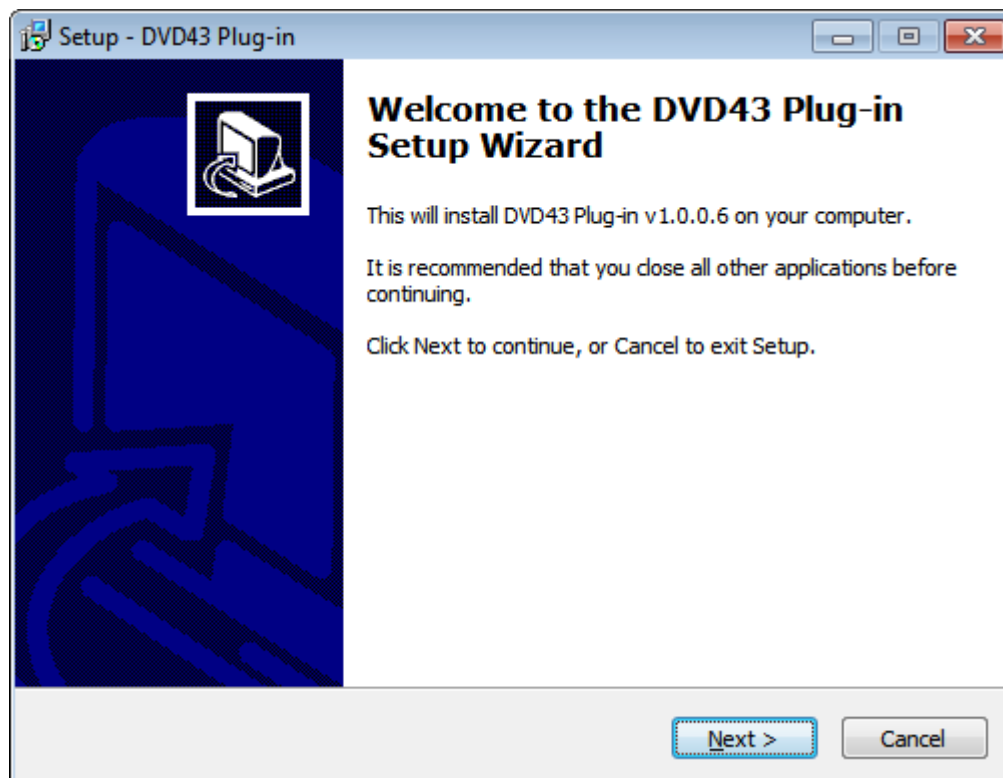

In the early days of region coding, DVD drives adopt a RPC-1 which is referred to "regional playback control" system. The PC software such as VLC enables to play

DVDs and ignore RPC-1. However, VLC can't access to the DVD's raw data because of DVD DRM protection such as CSS encryption and some drive with RPC-2 firmware. About ten years ago, the entertainment industry began to use RPC-2 which enforces the DVD region coding at the hardware level. By inputting the right unlocking code or patching [the firmware chip](#), we could avoid restrictions from RPC-2. It's somewhat risky and leads to invalidate the remaining warranty. So the effective method is to use DVD & Blu-ray Region killer program that removes the region code.

## DVD43 Plugin

DVD43 Plug-in (DVD43.DLL) is a free DVD Region Killer that DVD Copy programs can use to bypass DVD region code.

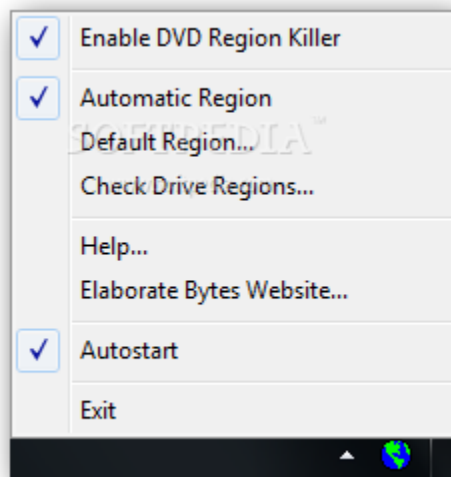

Support OS: Windows 2000, Windows XP, Vista, Windows 7, Windows 8. (Both 32 bits and 64 bits)

How to use it: Install DVD43 plugin and run it. Launch your DVD copy program which should supports DVD43 plugin. Then all DVD copy protections including DVD Region are all decrypted.
